Source name (Resolver)
 Case-insensitive search for source name, to be resolved with Sesame. Wildcard matching is disabled. Search is performed within a radius of 10 arcminutes.

A search radius in degrees can be added to the end separated by a comma.

Description.
 Use Sesame (via. NED, Simbad and Vizier) to parse names commonly found throughout literature. A green tick indicates a successful search, otherwise, a red cross is returned.

Example
 Cen A
[NGC3375](#)
[ARP220_20](#)

File upload
 Option to allow the use of a user-prepared text file for multi-positional searches.

Description
 A text file with target names or positions can be loaded onto the server and the query is executed for each of them in turn. Constraints in the other input fields are taken into account. Each target must be placed on a separate line, coordinate values must be separated by a tab or space(s).

Example text file with the content

```
M87
12:30:31.25 12:25:26.9
187.630187836999994
12.4241224771999992

- The most important change:
 - **collapsed rows**: e.g. we now **compute and then show 1 single row for mosaic** including correctly estimated values like average integration time within the mosaic and the computation of footprints
 - Ground work for ingesting **individual files**
- More progress
 - **Scientific keywords** (from the OT) and **scientific categories**
 - search on **publications** (count!, abstracts!, authors, title, bibcode):
 - “show me all public unpublished data”
 - “show me all data (or projects) used in publications which have 'molecular hydrogen' in their abstract”
 - “show me all publications from data of 'Disks around high-mass stars”
 - display all results as **publication view**

- query on **field of view** (including for mosaics)
- query on **largest angular scale** (per Member OUS, i.e. array)
- display of the existing observations as **footprints on the sky**
- upload of a **list of targets** for simultaneous search
- interactive **change of units** (decimal degrees/sexagezimal, m/s→km/s, ...) on the results table
- query on **continuum sensitivity** (estimated from the raw data)
- query on **line sensitivity @10km/s** (estimated from the raw data)
- query on **Co-Is** (after the call)
- query on **scientific keywords** and **categories**

even more progress

- subfiltering on **mosaics** vs single pointings
 - subfiltering on **array-types** (12m, 7m, TP)
 - subfiltering on QA2 status
-
- The ALMA Science Archive then has **more and better query input fields** than
HST (<https://archive.stsci.edu/hst/search.php>), XMM (<http://nxsa.esac.esa.int>), HLA (hla.stsci.edu), ESO (<http://archive.eso.org>), VLA (<https://archive.nrao.edu/archive/advquery.jsp>), Chandra (<http://cda.harvard.edu/chaser/>), Keck (<https://koa.ipac.caltech.edu/cgi-bin/KOA/nph-KOALogin?more>), CARMA (<http://carma-server.ncsa.uiuc.edu:8181/asp/carmaQuery.cgi>), Herschel (<http://www.cosmos.esa.int/web/herschel/science-archive>), CADC (<http://www.cadc-ccda.hia-ihc.nrc-cnrc.gc.ca/en/search/>), GEMINI (<https://archive.gemini.edu/searchform>), LOFAR (<http://lofar.target.rug.nl/>), GALEX (<http://galex.stsci.edu/galexview/>), APEX (<http://archive.eso.org/wdb/wdb/eso/apex/form>), EVN (<http://archive.jive.nl/scripts/avo/fitsfinder.php>), eMerlin (http://www.merlin.ac.uk/archive/archive_form.html), SUBARU (<http://smoka.nao.ac.jp/fssearch.jsp>), GTC (<http://gtc.sdc.cab.inta-csic.es/gtc/jsp/searchform.jsp>), SMA (<https://www.cfa.harvard.edu/cgi-bin/sma/smaarch.pl>), ...

- Request-Handler:
 - product categories can be selected
 - complete tree is displayed
 - SB names and Source names now available directly on the RH before download
 - readme file with the content and the full directory names

2. plan

5-year plan

	Title	Description	Components	Expected/proposed deployment	Priority
1	query interface improvements	abstract display and search, largest angular scale search	AQ	Q1 2016	1
2	row collapsing	computing "collapsed rows" from the raw data metadata resulting in rows	Harvester	Q3 2016	2
3	query interface improvements 2	showing of collapsed rows only, bibliography search, result list streaming	AQ	Q3 2016	3
4	individual product ingestion	ingest new files from pipeline and manual reduction individually rather than in tar files allowing to also offer individual access of products (FITS cubes, weblog, README, ...)	PipelineIngestion, Harvester, DP	Q3 2016	4
5	query interface improvements 3	access to individual files, previews	AQ	Q1 2017	5
6	VO+cutout services	ObsTAP, SIAPv2, DataLink, cutout using DataAccess	AQ, RH, NGAS, DP	Q3 2017	6
7	ADMIT integration 1	inclusion of ADMIT into the workflow and ingestion of ADMIT products and their delivery	PipelineIngestion, RH, DP	Q3 2017	7
8	user reprocessing	service to allow users to execute a modified pipeline (or MS generation, or calibrator data extraction) on the ARC clusters	AQ, RH, DP	Q1 2018	8
8	CARTA integration	allow users to visualize large ALMA cubes remotely through their browsers	AQ, RH, NGAS, Clusters	Q3 2018	9
10	query interface improvements 4	solar system object search, ultra-fast query engine, facets/histograms, AladinLite with footprint display	AQ	Q3 2018	10
11	ADMIT integration 2	Ingestion of identified sources and lines	ProductIngestion, Harvester, DP, RH	Q1 2019	11
12	query interface improvements 5	search capabilities for individual ADMIT results	AQ	Q1 2019	12
13	Ingestion of external products 1	allow FITS cubes, README files and tar files produced by the PIs of LPs to be ingested. Potentially allow for the addition of links to external resources (e.g. zenodo.org)	RH, DP, Product Ingestion	Q1 2020	13
14	Ingestion of external products 2	display the LP products and allow for individual downloads of FITS and README (maybe more)	AQ	Q1 2020	14
15	query interface improvements 6	recommender system for data and publications	AQ, RecommenderSystem?	Q3 2020	15

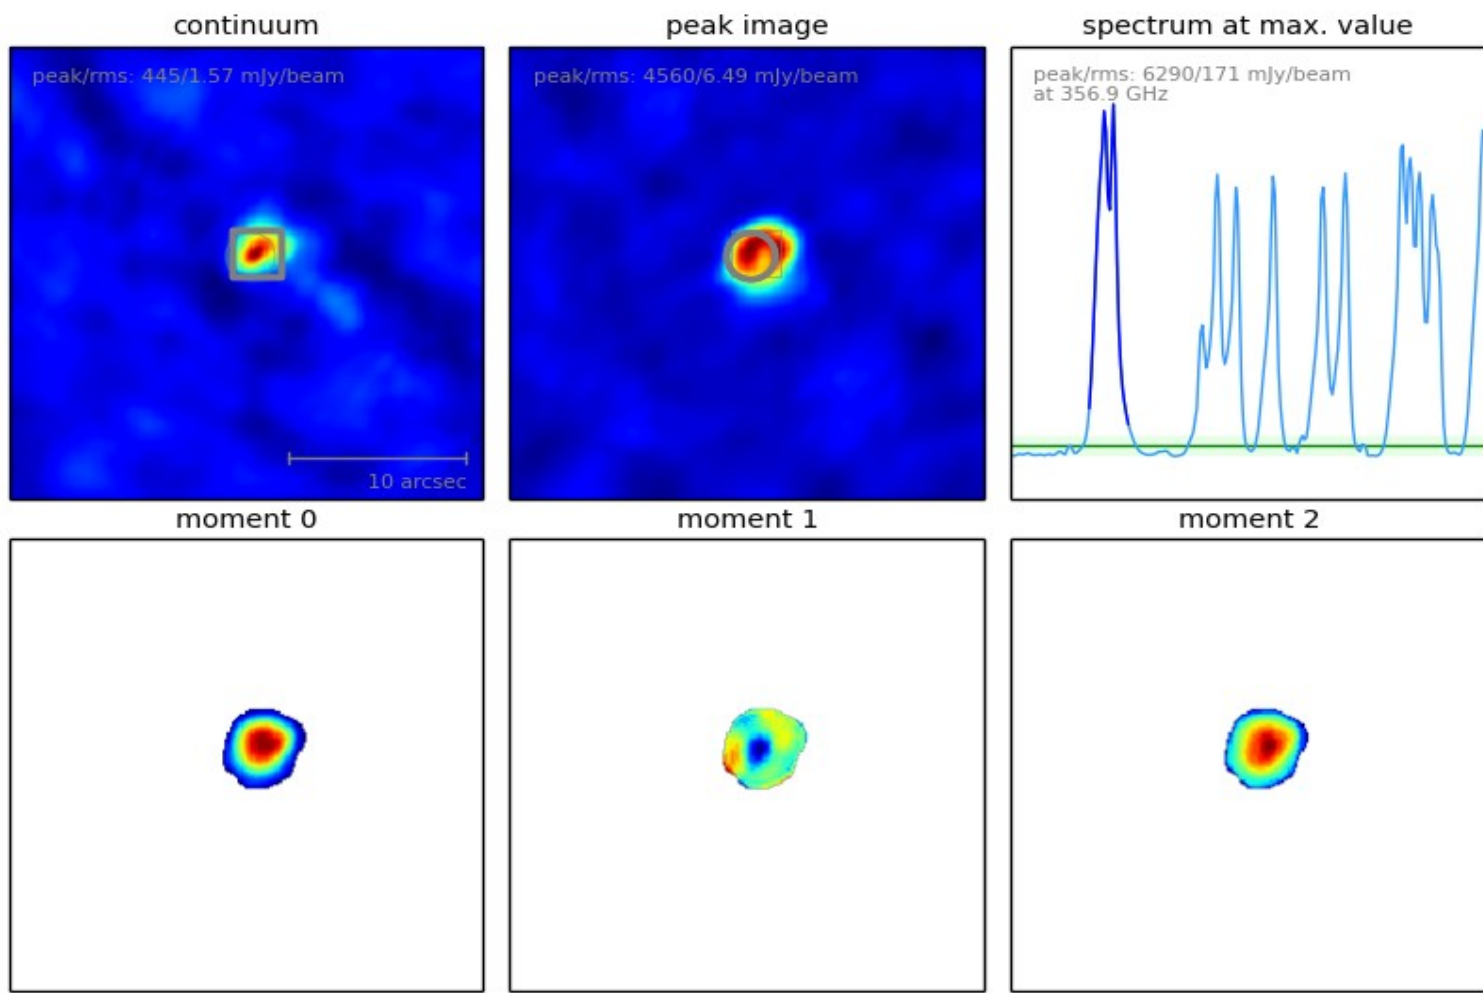

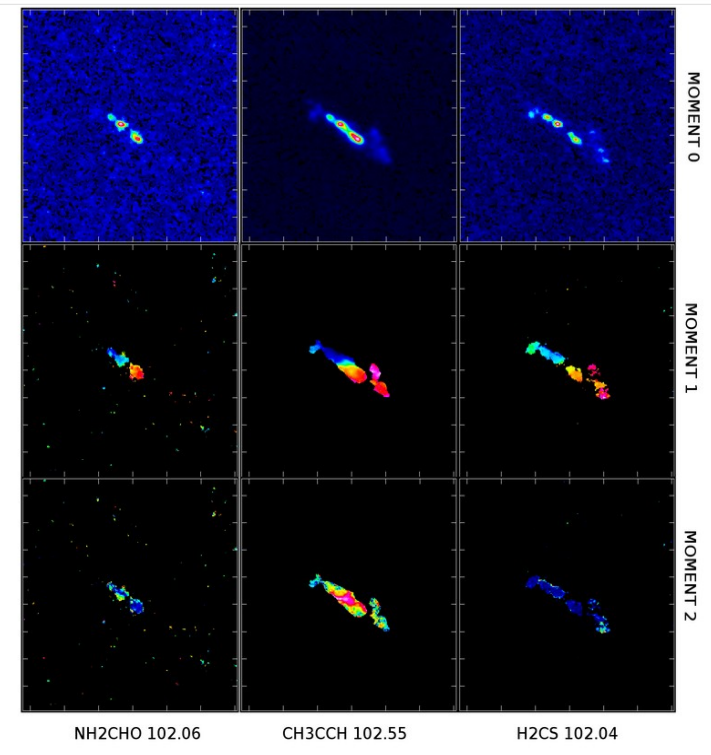

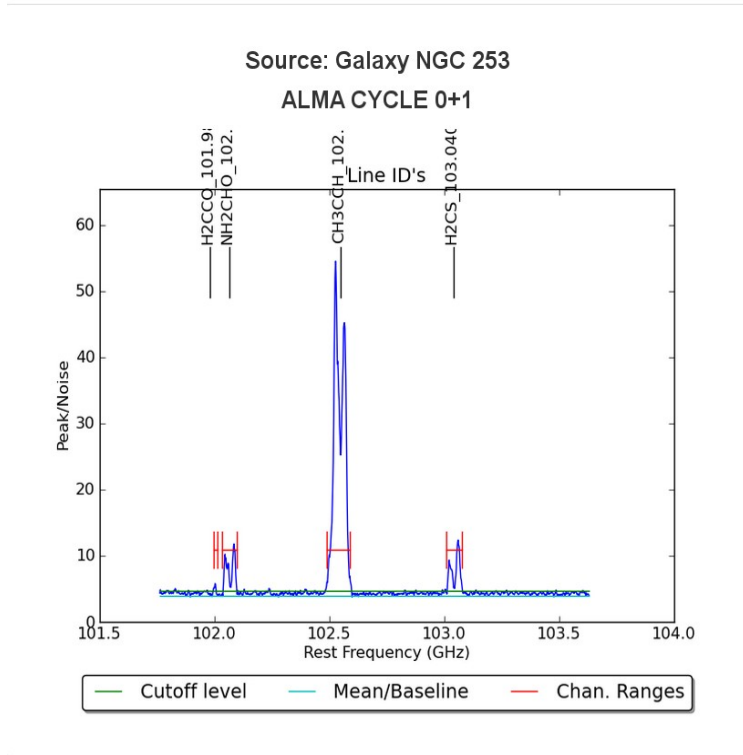

5-year plan

- Ingestion of individual files
- Interface improvements
- VO services
- Generation and display of previews
- ADMIT integration into the workflow

CARTA

3. products

- **data-management problems**

- still very large amounts of **manual data reduction** required
- Pipeline **not ready** for science-grade imaging (but starting!)
 - amount of products is **very low**
- only about **8% of all science channels are imaged!**
- if calibrators are included, only about 3%

- Cycle 5: hopefully close to complete imaging (with mitigation for the product sizes for the largest 3 configurations)

- Archive **needs full, complete and generic products** from Pipeline/JAO

- to enable/facilitate/speed up **archival research**
- for **additional services**: previews, VO, visualization (CARTA), analysis (ADMIT)

- Users **want products** as recorded in the Helpdesk:
 - “Hi, I was looking at Cycle 1 band-3 data for [...]. The pipelined data has no actual image products in the products directory, only masks. With a couple of hours of expert help from [...] at the [...] ARC., we were able to edit and run the scripts and make continuum images. I just thought you'd like to know, because I would normally have given up, I just happened to be at the ARC for something else so could ask about the problem. [...]”
 - “Hello, I would like to be able to analyse the full range of observed channels in archive data. The processed cube files I found had the channels already cut, probably according to the aim of the original goal of the observations. In order to get access to the full range of channels, is it necessary to re-reduce the data from raw product, or the calibrated measurement file prior to the frequency selection is kept in the archive? if so, where can i find it? [...]”

- Users **want previews/products** as recorded in the UserSurvey:
 - “quick-look image or spectrum”
 - “quick look tools”
 - “To view a quick image of the data”
 - “quick look images”
 - “Easy access to clean image”
 - “Making plots. “
 - “eventually it will be great to have images available of calibrators and science targets”
 - “quick look imaging and coarsely-binned cubes.”
 - “ It would be nice to have images archive for all spectral lines”

- continued ...
 - “complete full cubes, complete products, not only PI targets.”
 - “FITS files”
 - “images, data cubes”
 - “Imaged datasets”
 - “data cubes”
 - “quicklook images”
 - “quicklook images (but that's probably difficult to achieve)”

- The ALMA Science Archive is making **huge progress**
- **Still a LOT of work** to do
- But:

For the first time, the ALMA
Science Archive starts to be competitive
