SOFTWARE
APPLICATIONS

Contents

- Introduction to CASA
- Status of the sw development
- CASA User Support and training
- ALMA data product
- f2f Support at the ARCs

Introduction to CASA

- What is CASA?
- Who develops CASA?
- What are the main requirements and how does CASA meet them?
- How does CASA look and work?

CASA is...

CASA = Common Astronomy Software
Applications

- CASA is a set of C++ application libraries for the data reduction and analysis of radio astronomical data
- applications run through the IPython interface to Python
- developed for ALMA and EVLA projects
- ...but also for data from other radio, millimeter, and sub-mm telescopes

Development team

Originally only developed at NRAO (Socorro, NM), now

Approx. 17 FTE developers are at work at

NRAO Socorro (7.5)

NRAO Charlottesville (2+1)

NAOJ (3)

University of Virginia (0.5)

University of Calgary (1)

Observatoire de Paris (0.5)

ESO Garching (2)

+ 1 Deputy manager (NRAO Socorro)

+ 1 Project Scientist (NRAO Socorro) = Steve Myers

+ 1 Manager (NRAO Socorro) = Brian Glendenning = Manager ALMA
Computing IPT

+ a few 5% FTEs at ASTRON, ATNF, and other places

CASA requirements ...

Requirements Document:

ALMA Offline Data Processing Requirements

(first draft: 3 Jun 01, latest draft: 4 Oct 07)

describes on 68 pages requirements concerning:

- 1) Interaction with the ALMA pipeline
- 2) User Interface
- 3) Data handling (import/export)
- 4) Calibration and editing
- 5) Imaging
- 6) Scientific analysis (image analysis, unit conversion, etc.)
- 7) Visualization
- 8) Simulation and other special features

... and how CASA meets them

Overall architecture:

- A data structure
Tables: Images, Caltables, and the Measurement Set
- A set of data import/export facilities
the so-called fillers: ASDM \rightarrow MS, FITS \rightarrow MS, UVFITS \rightarrow MS, PdBI \rightarrow MS, etc.
- A set of low-level tools for data access, display, and editing
tools to load/write data into/from casacore datatypes, matplotlib for basic x/y plotting, Qt-based table browser

... and how CASA meets them

- A set of high-level tools for science analysis algorithms
the Measurement Equation = a set of C++ classes for radio astronomical calibration and imaging
- A programmable command line interface with scripting
Python (augmented by IPython) gives a MATLAB-like interactive language
- Documentation
inline documentation using doxygen + an extensive cookbook (500 pages) + user reference manual

Task and Tools

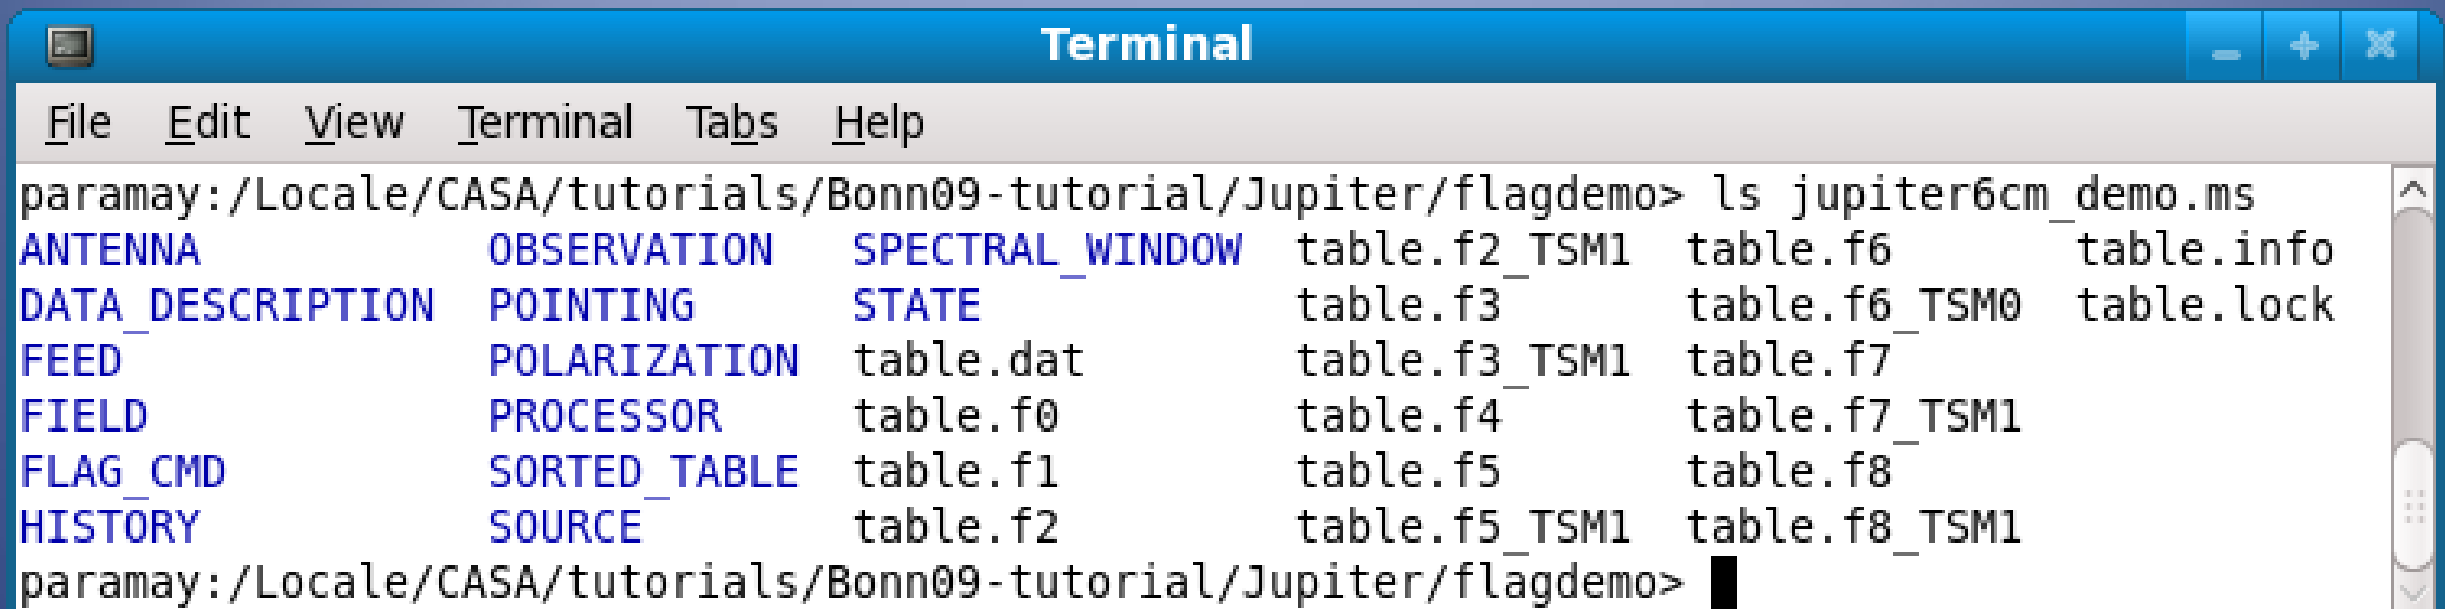

- Task: high (user) level functionality
 - call from Python as functions
 - standard tasking interface
 - parameter manipulation using inp, default, saveinputs, tget
 - arguments are parameters
 - documentation: Cookbook
- Toolkit: full functionality represented
 - tools are functions and underlying tasks
 - documentation: Reference Manual

CASA in practice

- Data in CASA are stored in tables
 - also tables for images and calibration tables
- Visibility data are stored in Measurement Set (MS) table
- the MS is a directory on the disk
 - MAIN table containing the visibility data
 - sub-tables (*=sub-directories*) containing auxiliary information
 - e.g. FIELD, SOURCE, ANTENNA, etc.

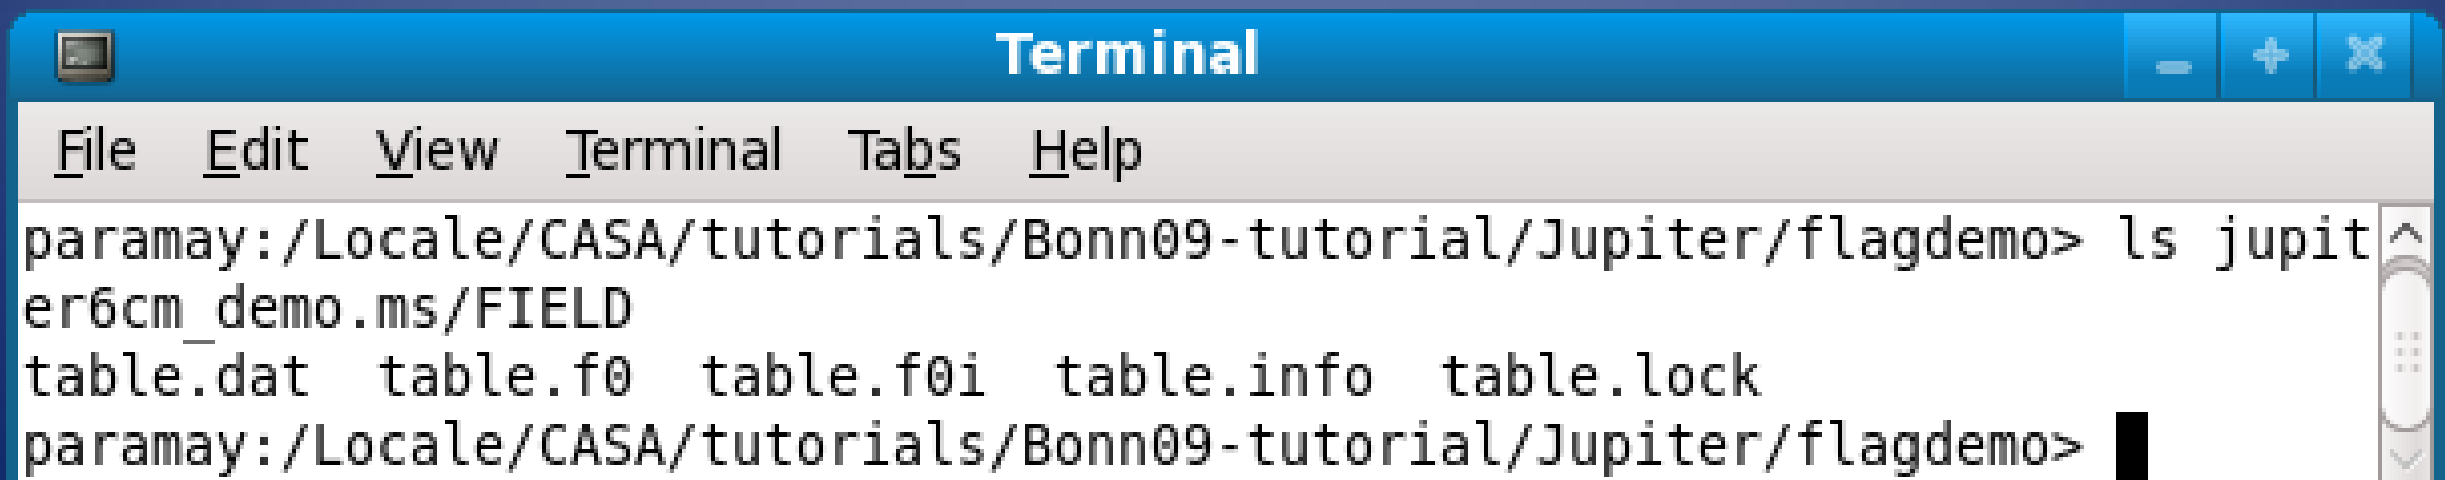

Example :

- ls jupiter6cm_demo.ms

```
Terminal
File Edit View Terminal Tabs Help
paramay:/Locale/CASA/tutorials/Bonn09-tutorial/Jupiter/flagdemo> ls jupiter6cm_demo.ms
ANTENNA          OBSERVATION      SPECTRAL_WINDOW  table.f2_TSM1    table.f6          table.info
DATA_DESCRIPTION POINTING          STATE             table.f3          table.f6_TSM0     table.lock
FEED             POLARIZATION     table.dat         table.f3_TSM1    table.f7
FIELD            PROCESSOR        table.f0          table.f4          table.f7_TSM1
FLAG_CMD         SORTED_TABLE     table.f1          table.f5          table.f8
HISTORY          SOURCE           table.f2          table.f5_TSM1    table.f8_TSM1
paramay:/Locale/CASA/tutorials/Bonn09-tutorial/Jupiter/flagdemo>
```

- ls jupiter6cm_demo.ms/FIELD/

```
Terminal
File Edit View Terminal Tabs Help
paramay:/Locale/CASA/tutorials/Bonn09-tutorial/Jupiter/flagdemo> ls jupiter6cm_demo.ms/FIELD
table.dat table.f0 table.f0i table.info table.lock
paramay:/Locale/CASA/tutorials/Bonn09-tutorial/Jupiter/flagdemo>
```

The Measurement Set ...

- developed by Cornwell, Kemball, & Wieringa between 1996 and 2000
- designed to store both interferometry (multi-dish) and single-dish data
- supports (in principle) any setup of radio telescopes
- supports description and processing of the data via the Measurement Equation

The Measurement Equation (Hamaker, Bregman & Sault 1996)

- decompose into individual calibration components,

$$\vec{V}_{ij}^{obs} = \vec{B}_{ij} \vec{G}_{ij} \vec{D}_{ij} \vec{P}_{ij} \vec{T}_{ij} \vec{F}_{ij} \vec{V}_{ij}^{ideal}$$

where:

B = Bandpass, G = gain, D = D-Term (pol. leakage),
T = Tropospheric effects, F = Faraday rotation

- linearise and solve by χ^2 minimization

```
Terminal
File Edit View Terminal Tabs Help
[rossetti@arcbl02 ~]$ casapy
CASA Version 2.4.0 (build #8115)
Built on: Thu 2009/06/18 20:26:05 UTC

Available tasks:

accum      flagdata    listcal     sdlist
applycal   flagmanager listhistory sdplot
bandpass   fluxscale  listobs     sdsave
blcal      ft          listvis     sdscale
browsetable gaincal     makemask    sdsmooth
clean      hanningssmooth mosaic      sdstat
clearcal   imcontsub  plotants    setjy
clearplot  imhead     plotcal     smoothcal
clearstat  immoments  plotxy      specfit
concat     importfits plotxy       split
deconvolve importuvfits sdaverage    tget
exportfits importvla   sdbaseline  uvcontsub
exportuvfits imregrid    sdcal       uvcontsub2
feather    imsmooth   sdcoadd     uvmodelfit
filecatalog imstat     sdfit       viewer
find        imval      sdflag      vishead
fixvis      invert     widefield

Additional tasks available for ALMA commissioning use
(still alpha code as of Beta release):

simdata    importasdm

Available tools:

cb (calibrator)    cp (cal plot)    fg (flagger)
ia (image analysis) im (imager)      me (measures)
mp (MS plot)       ms (MS)          qa (quanta)
sm (simulation)    tb (table)       tp (table plot)
vp (voltage patterns) at (atmosphere)

pl (pylab functions)
sd (ASAP functions - run asap_init() to import into CASA)

casalogger          - Call up the casalogger (if it goes away)

Help:
help taskname        - Full help for task
help par.parametername - Full help for parameter name
apropos string       - List tasks with string in their brief help.
tasklist             - Task list organized by category
taskhelp             - One line summary of available tasks
toolhelp             - One line summary of available tools
startup              - The start up screen
```

The CASA tools with GUI

In a typical CASA session you will use tools such as:

- plotxy: An X-Y plotter/interactive flagger for visibility data
- plotcal: An all-purpose plotter for calibration results
- browsetable: allows you to display any CASA table, e.g. Measurement Sets
- viewer:
 - view an image or visibility data set
 - view residuals and set boxes during the interactive cleaning

Functionality Census

- **Import:** importuvfits (for uv FITS e.g. from AIPS), importfits (for image FITS)
- **Export:** exportuvfits (for uv FITS), exportuvfits (for image FITS)
- **Information:** listobs, listcal, listhistory, imhead
- **Editing:** flagautocorr, flagdata, flagmanager, plotxy, viewer
- **Display:** clearplot, plotants, plotcal, plotxy, viewer

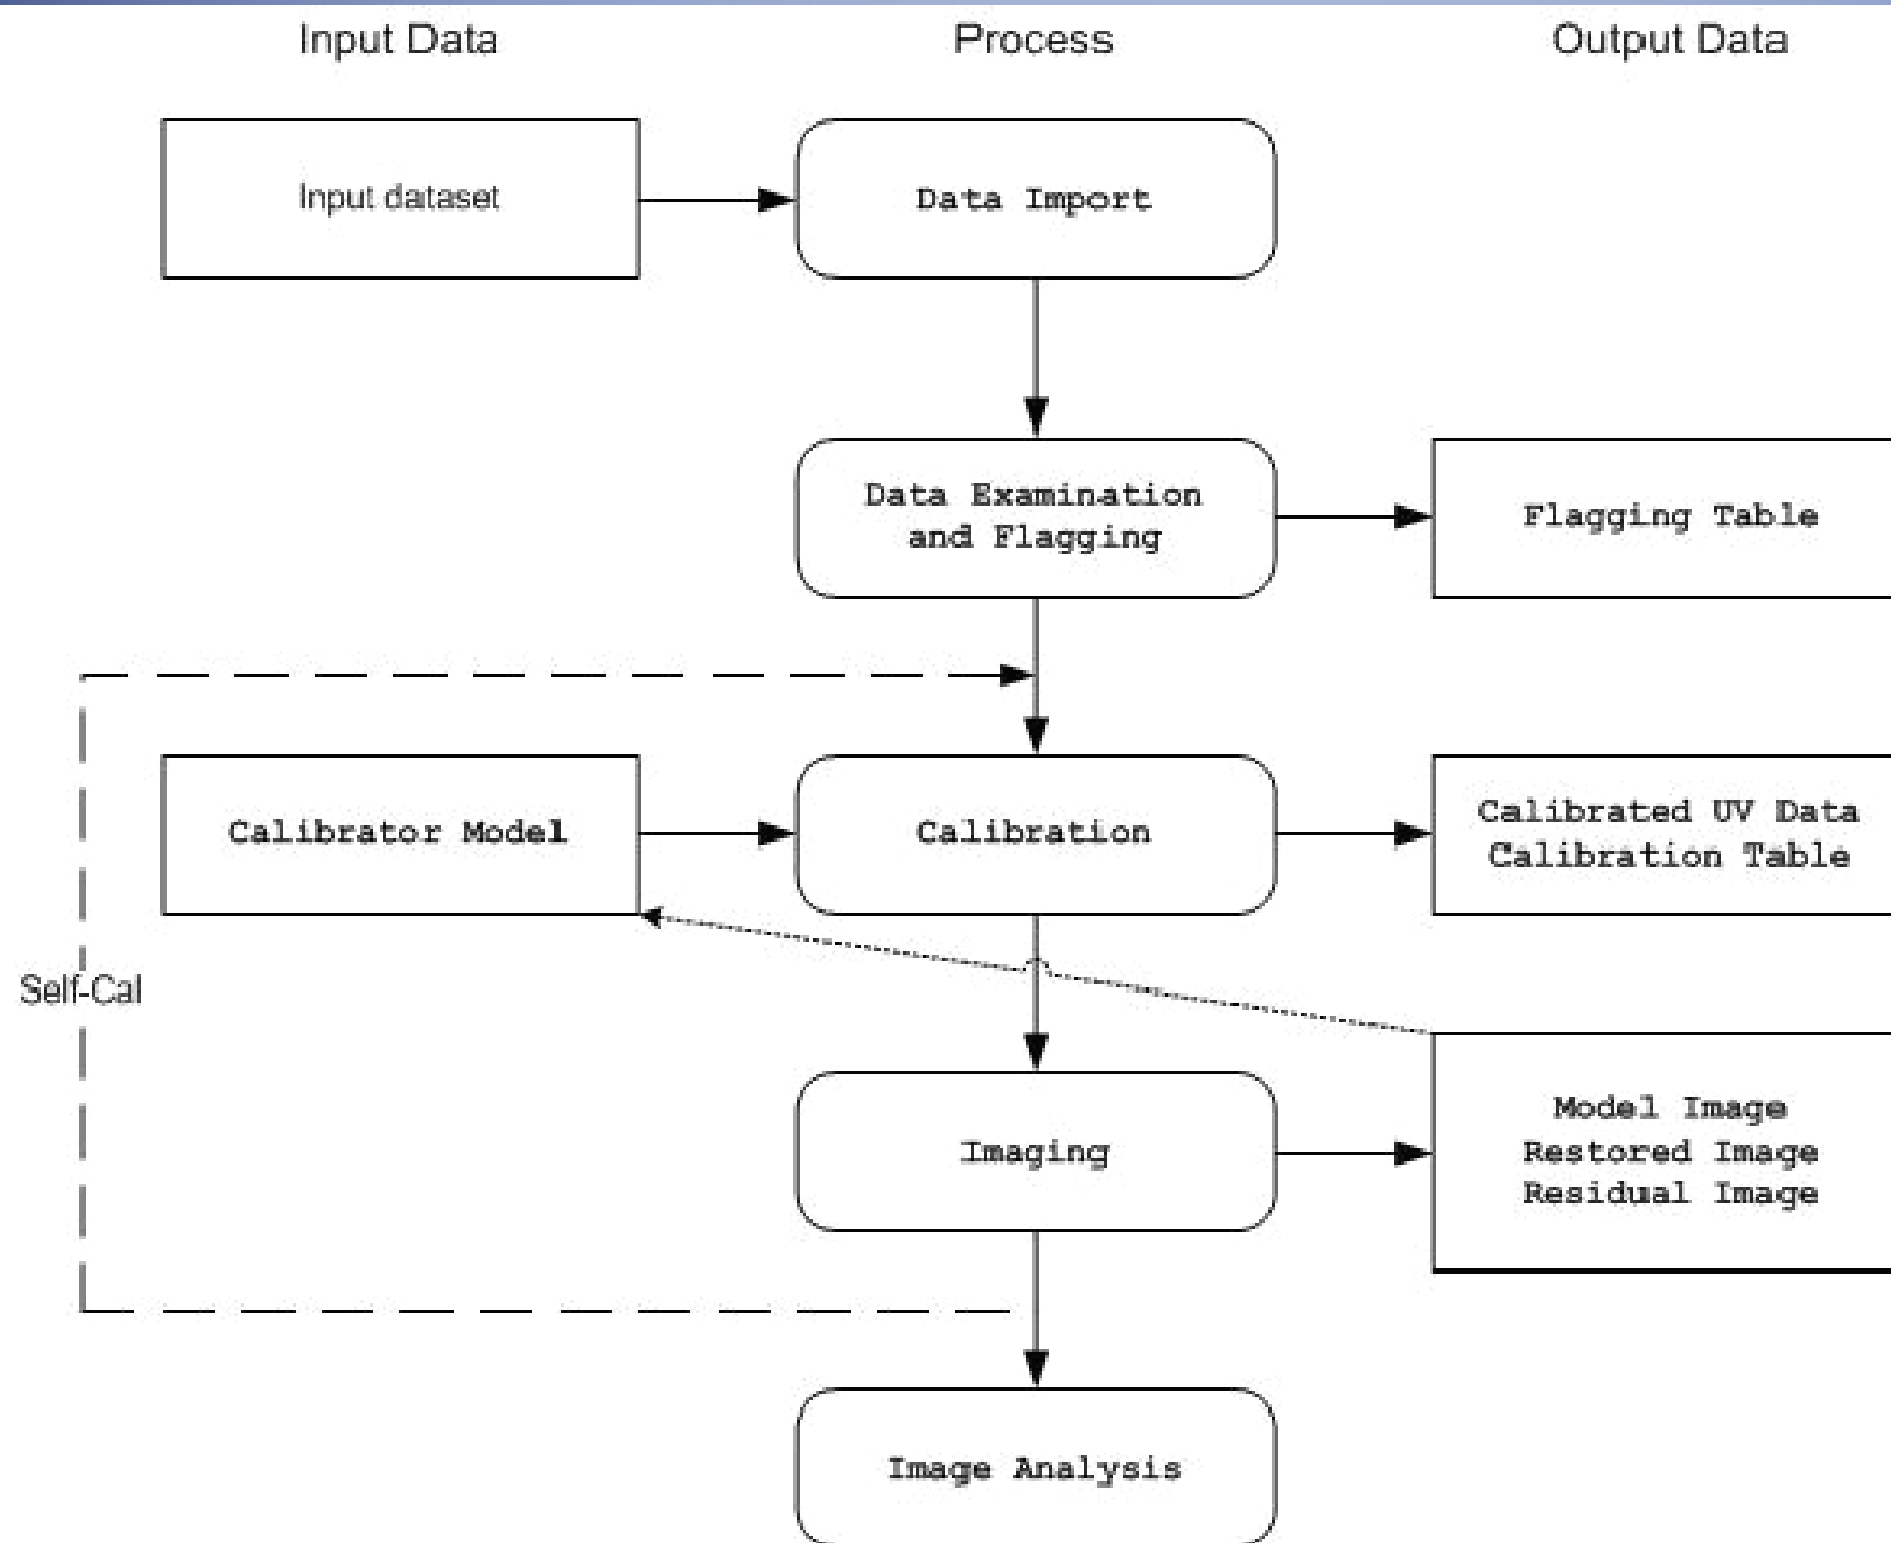

CASA in practice

- **Calibration:** accum, applycal, bandpass, gaincal, fluxscale, clearcal, listcal, smoothcal
- **Imaging:** clean, feather, ft, invert, makemask
- **Modelling:** setjy, uvcontsub, uvmodelfit
- **Analysis:** imhead, imcontsub, imfit, immath, immoments, imstat, imval, imregrid

Data Philosophy

- Original data kept intact by default
 - DATA (and WEIGHT) columns
 - do not change in original MS
 - user can use toolkit to mess with these also
- MS "scratch columns" are used
 - used for adjusted data and model visibilities

CASA in practice

CASA Workflow Chart

Import Data

- task importuvfits
 - UVFITS data (e.g. from AIPS)
- task importvla
 - VLA "export" format (e.g. from archive)
- task importasdm
 - ALMA data format (also EVLA eventually)

Data Examination

- task listobs
 - list summary of MS
- task plotxy
 - x-y line plots
- task browsetable
 - java browser for tables
- casaviewer
 - view raster images of MS

Flagging

- interactive flagging
 - task plotxy
 - task viewer (casaviewer)
- non interactive flagging
 - task flagdata
- managing flags
 - task flagmanager

Plotxy for data plotting & flagging

• use flagdata to clip data

```
CASA <19>: inp
-----> inp()
# flagdata :: All purpose flagging task based on selections
vis                = 'jupiter6cm_flagdemo.ms' # Name of file to flag
mode               = 'manualflag'             # Mode (manualflag, quack, shadow, autoflag, summary)
  autocorr         = False                     # Flag autocorrelations
  unflag           = False                     # Unflag the data specified
  clipexpr         = 'ABS RR'                  # Expression to clip on
  clipminmax       = [0.0, 0.75]               # Range to use for clipping
  clipcolumn       = 'DATA'                   # Data column to use for clipping
  clipoutside      = False                     # Clip outside the range, or within it

spw                = ''                       # spectral-window/frequency/channel
field              = '1331+305'               # Field names or field index numbers: ''==>all, field='0~2,3C286'
selectdata         = True                     # More data selection parameters (antenna, timerange etc)
  antenna          = ''                       # antenna/baselines: ''==>all, antenna = '3,VA04'
  timerange        = ''                       # time range: ''==>all, timerange='09:14:0~09:54:0'
  correlation       = ''                       # Select data based on correlation
  scan             = ''                       # scan numbers: ''==>all
  feed             = ''                       # multi-feed numbers: Not yet implemented
  array            = ''                       # (sub)array numbers: ''==>all
  uvrage           = ''                       # uv range: ''==>all; uvrage = '0~100klambda', default units=meters

async              = False                    # If true the taskname must be started using flagdata(...)
```

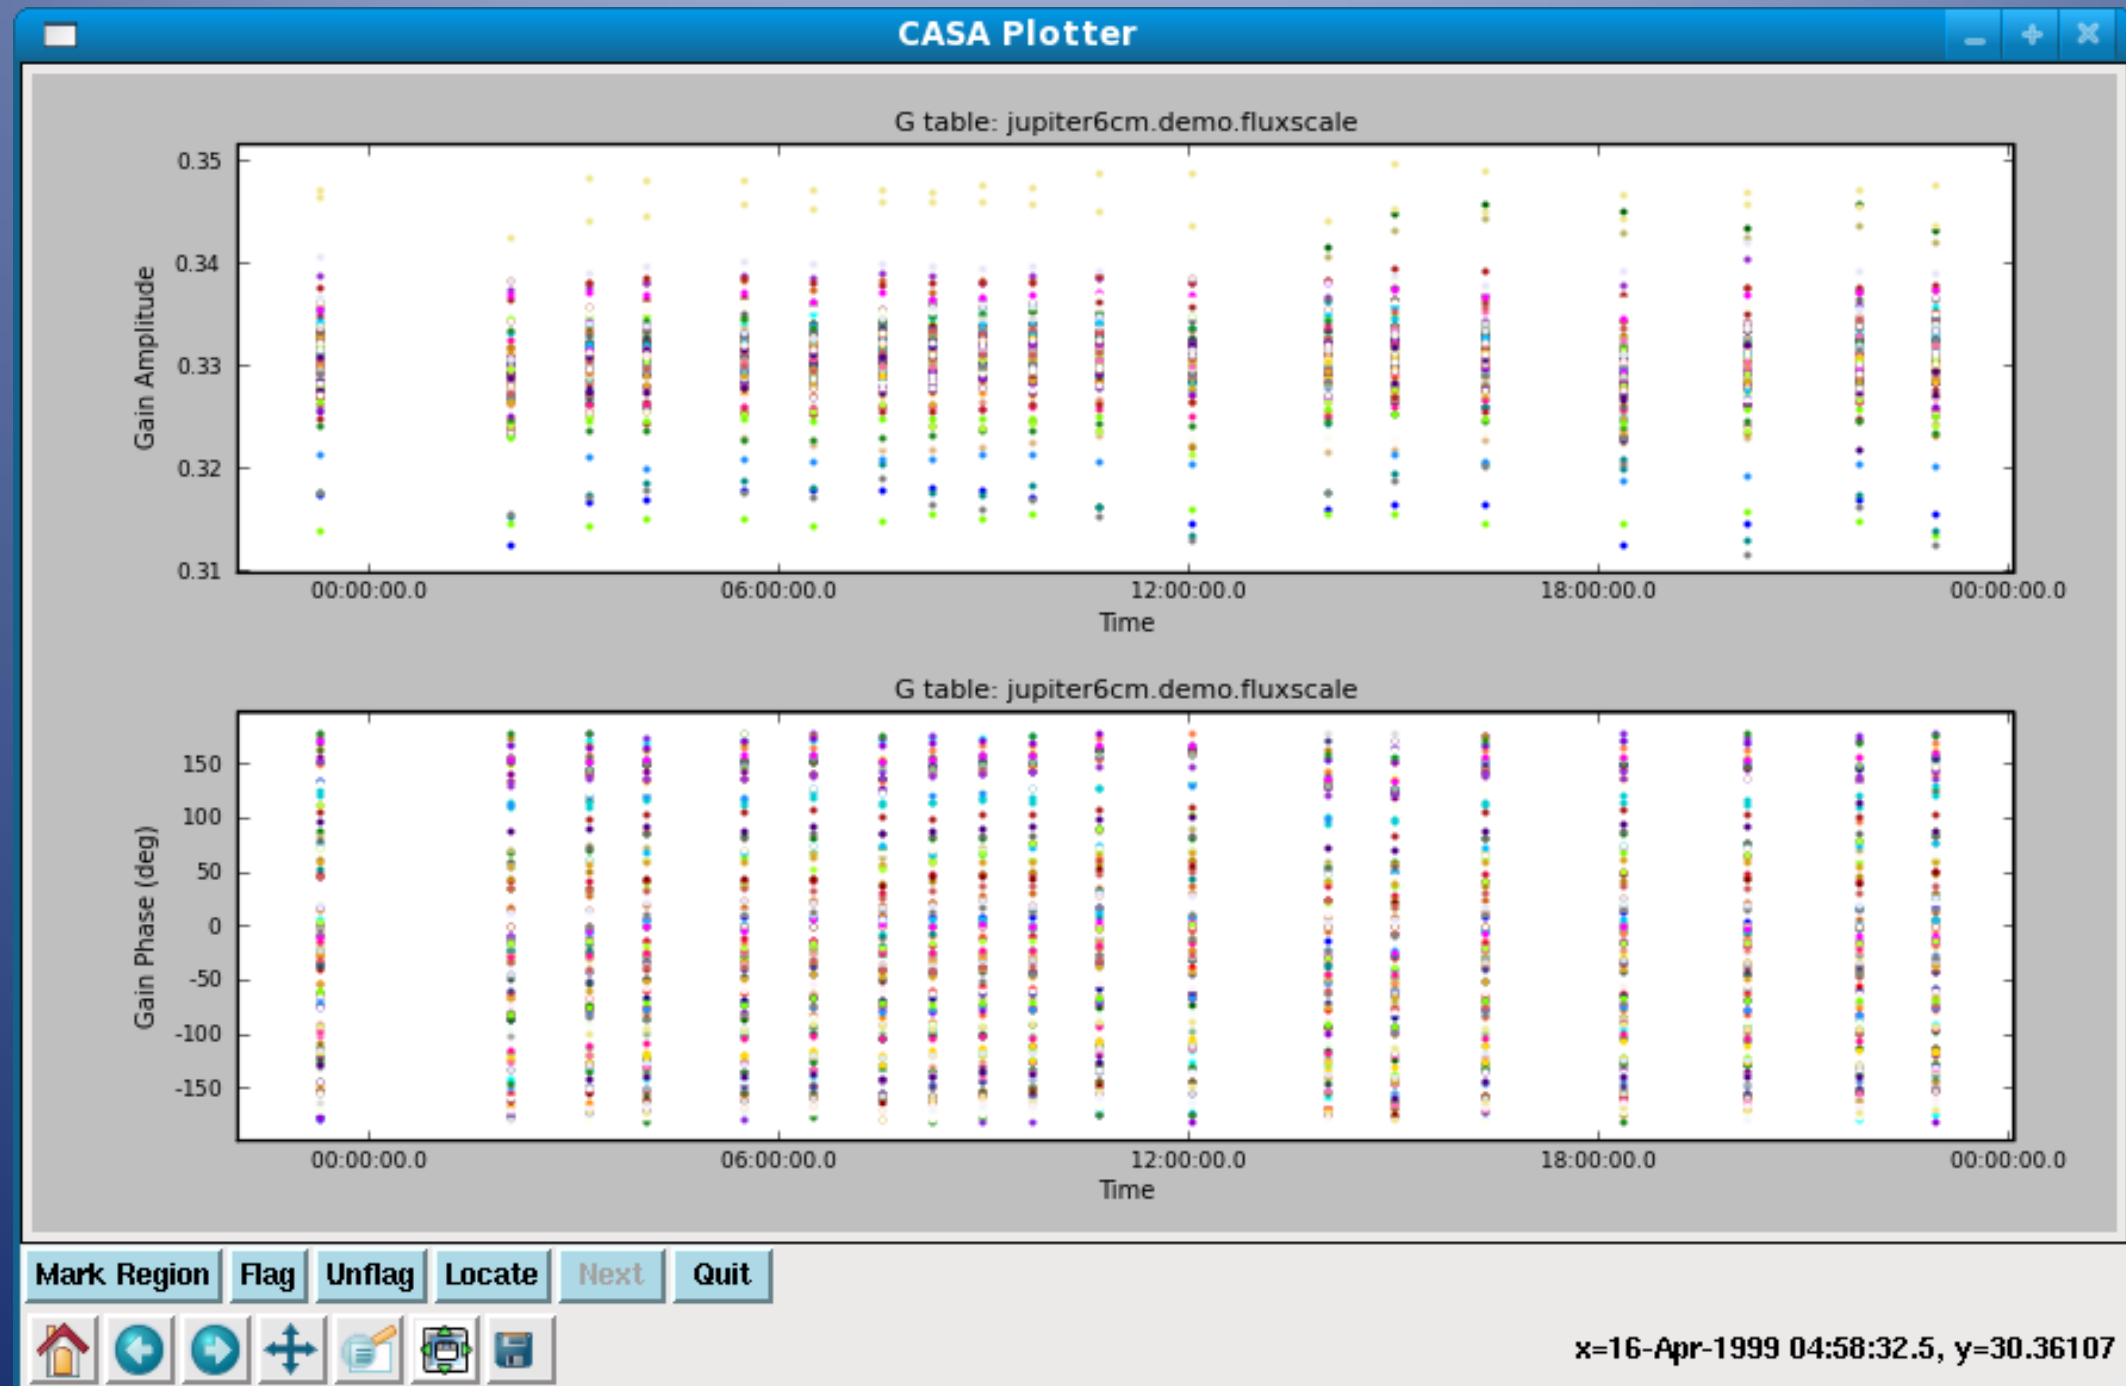

• set clipping levels as [min,max]

Calibration

- prior calibration: `setjy`
- solvers: `gaincal`, `bandpass`, `blcal`, `fringecal`
- manipulation: `plotcal`, `accum`, `smoothcal`
- application: `applycal`, `split`
- other: `uvcontsub`, `uvmodelfit`

CASA in practice

task plotcal will plot & edit calibration tables

Imaging

- task clean (variety of algorithms)
 - single-field cleaning
 - uses mosaic uv-gridder (uv-plane mosaicing on single image)
- task feather: combine single-dish and uvMS
- task widefield: prototype task!

Interactive Clean

CASA in practice

Task immoments

- use viewer to look NGC5921 VLA images
- Integrated intensity (m0) of HI
+
velocity contours (m1)

Task immoments

- Integrated VLA HI intensity (m0) in NGC2403

CASA in practice

Task immoments

- CO velocity field (m1) for the BIMA SONG NGC4826
- BIMA 3mm mosaic (7 pointings)

CASA in practice

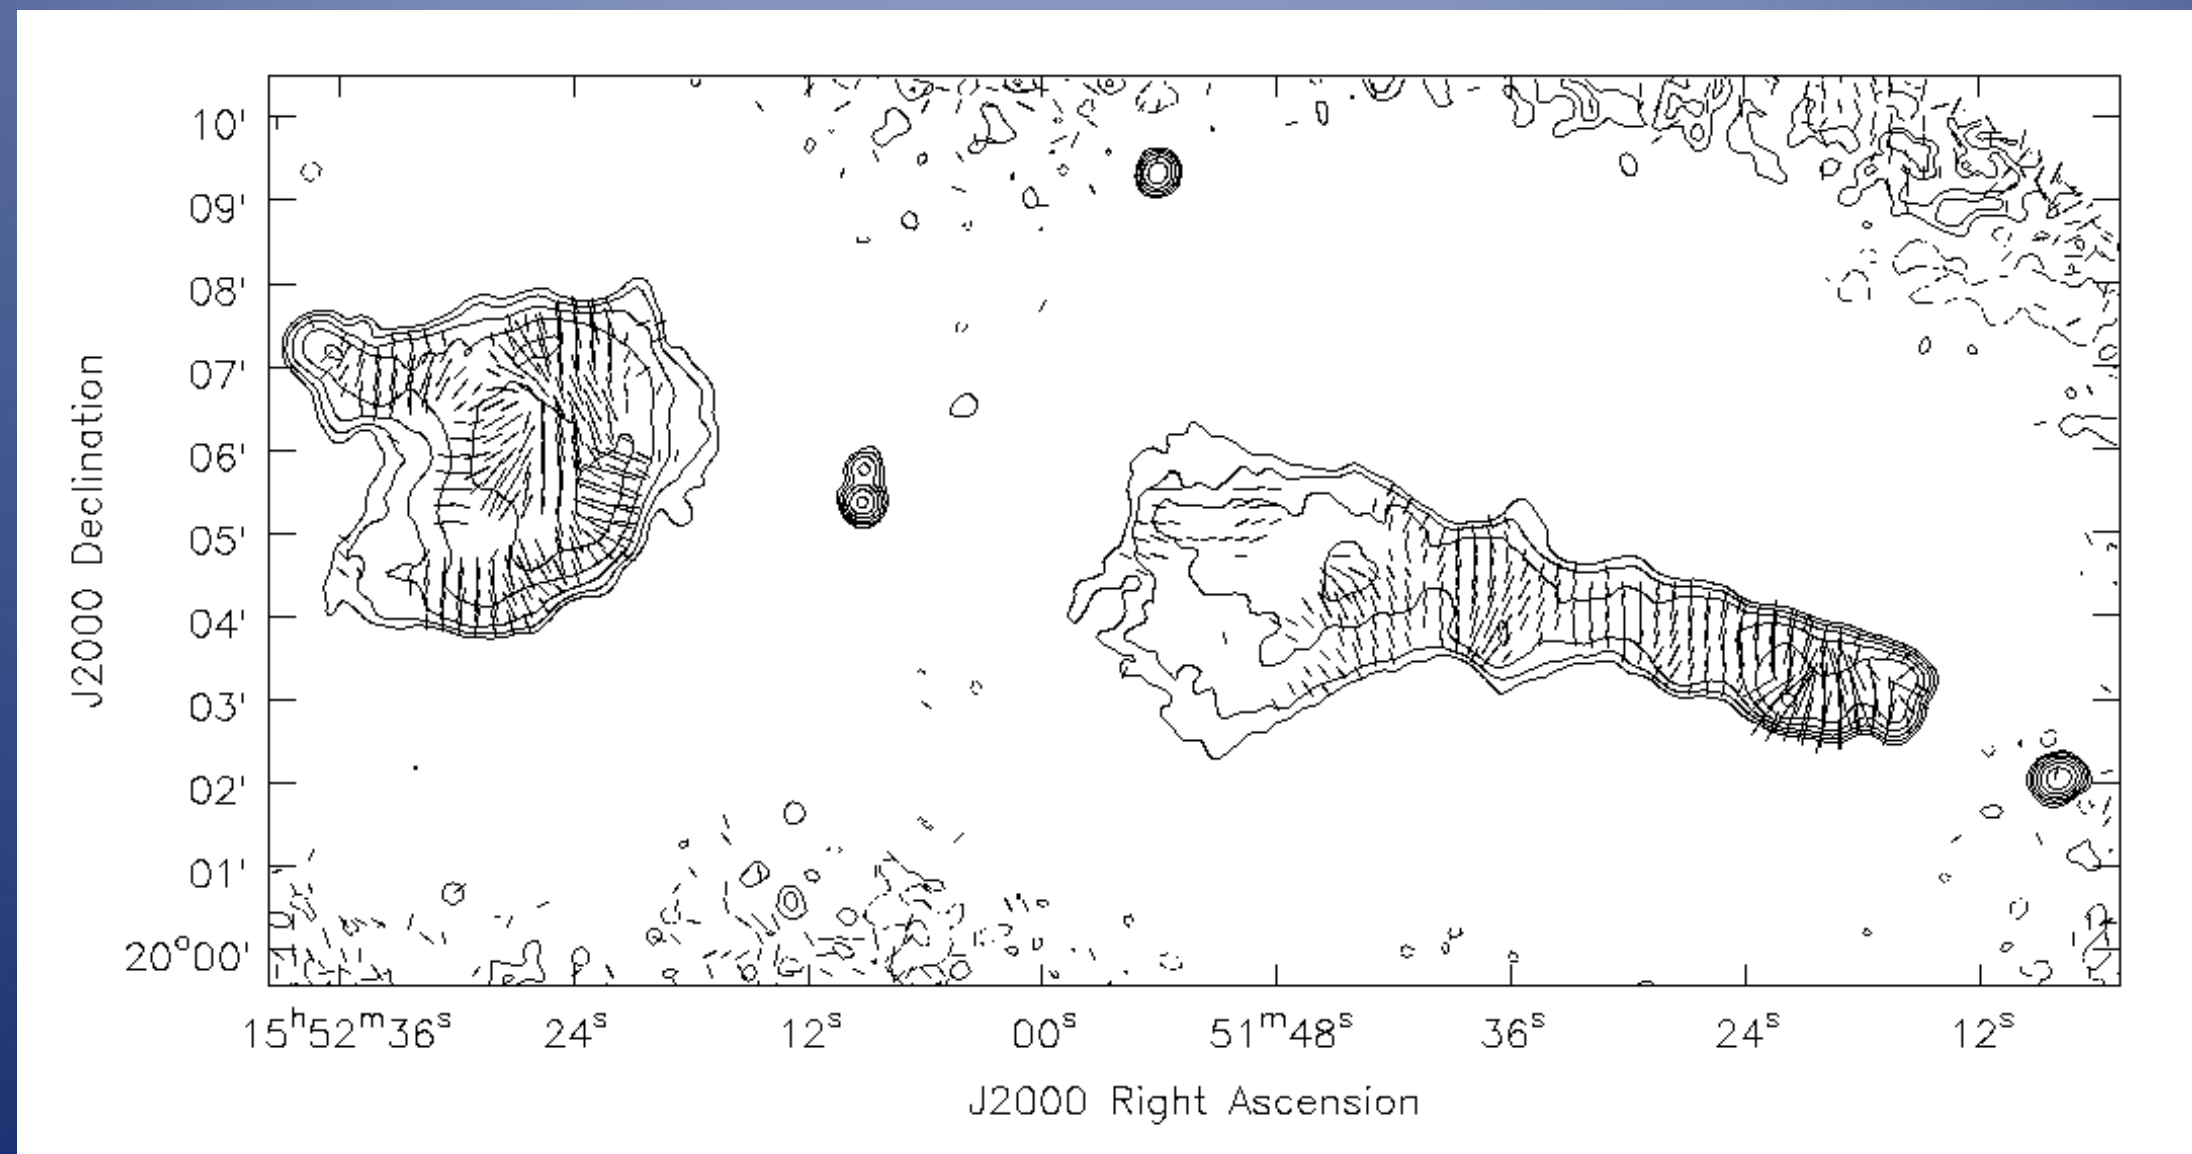

VLA C band
image of Jupiter

- Total intensity
+
polarised int.
contours
+
magnetic field
polarisation
vectors

VLA C band mosaic of 3C326

- Total intensity + electric field polarisation vectors

CASA in practice

Casa can:

- Import/export uvfits, VLA archive data, ASDM
 - VLA, ATCA (through MIRIAD), SMA and PdB (work in progress)

Casa can't:

- Import FITS calibration tables (e.g. CL,FG,etc.)
- solve delay, phase, rate VLBI combinations
- have mosaic and widefield
- Painful flagging through plotxy (→ plotms, beta v.)

Overall impression

- Works well for most VLA
- worth using for ATCA, CARMA etc. if AIPS unsuitable
- will be suitable for ALMA
 - See simdata task and future development
- and you can invoke any python functions (including accessing the rest of your system)

Status of the sw development

- Since Oct 2007 in Beta release.
 - still lacking of functionality
 - there are known failure modes
 - finding new problems
- download allowed after registration at the NRAO website (<http://my.nrao.edu>)
- the first public release (3.x) in December 2009, patch 3.0.1 (April 2010)
- development platforms: Linux (RH) + Mac Os X
 - supported platforms: also Fedora, openSuSe, Ubuntu, Debian

CASA User Support

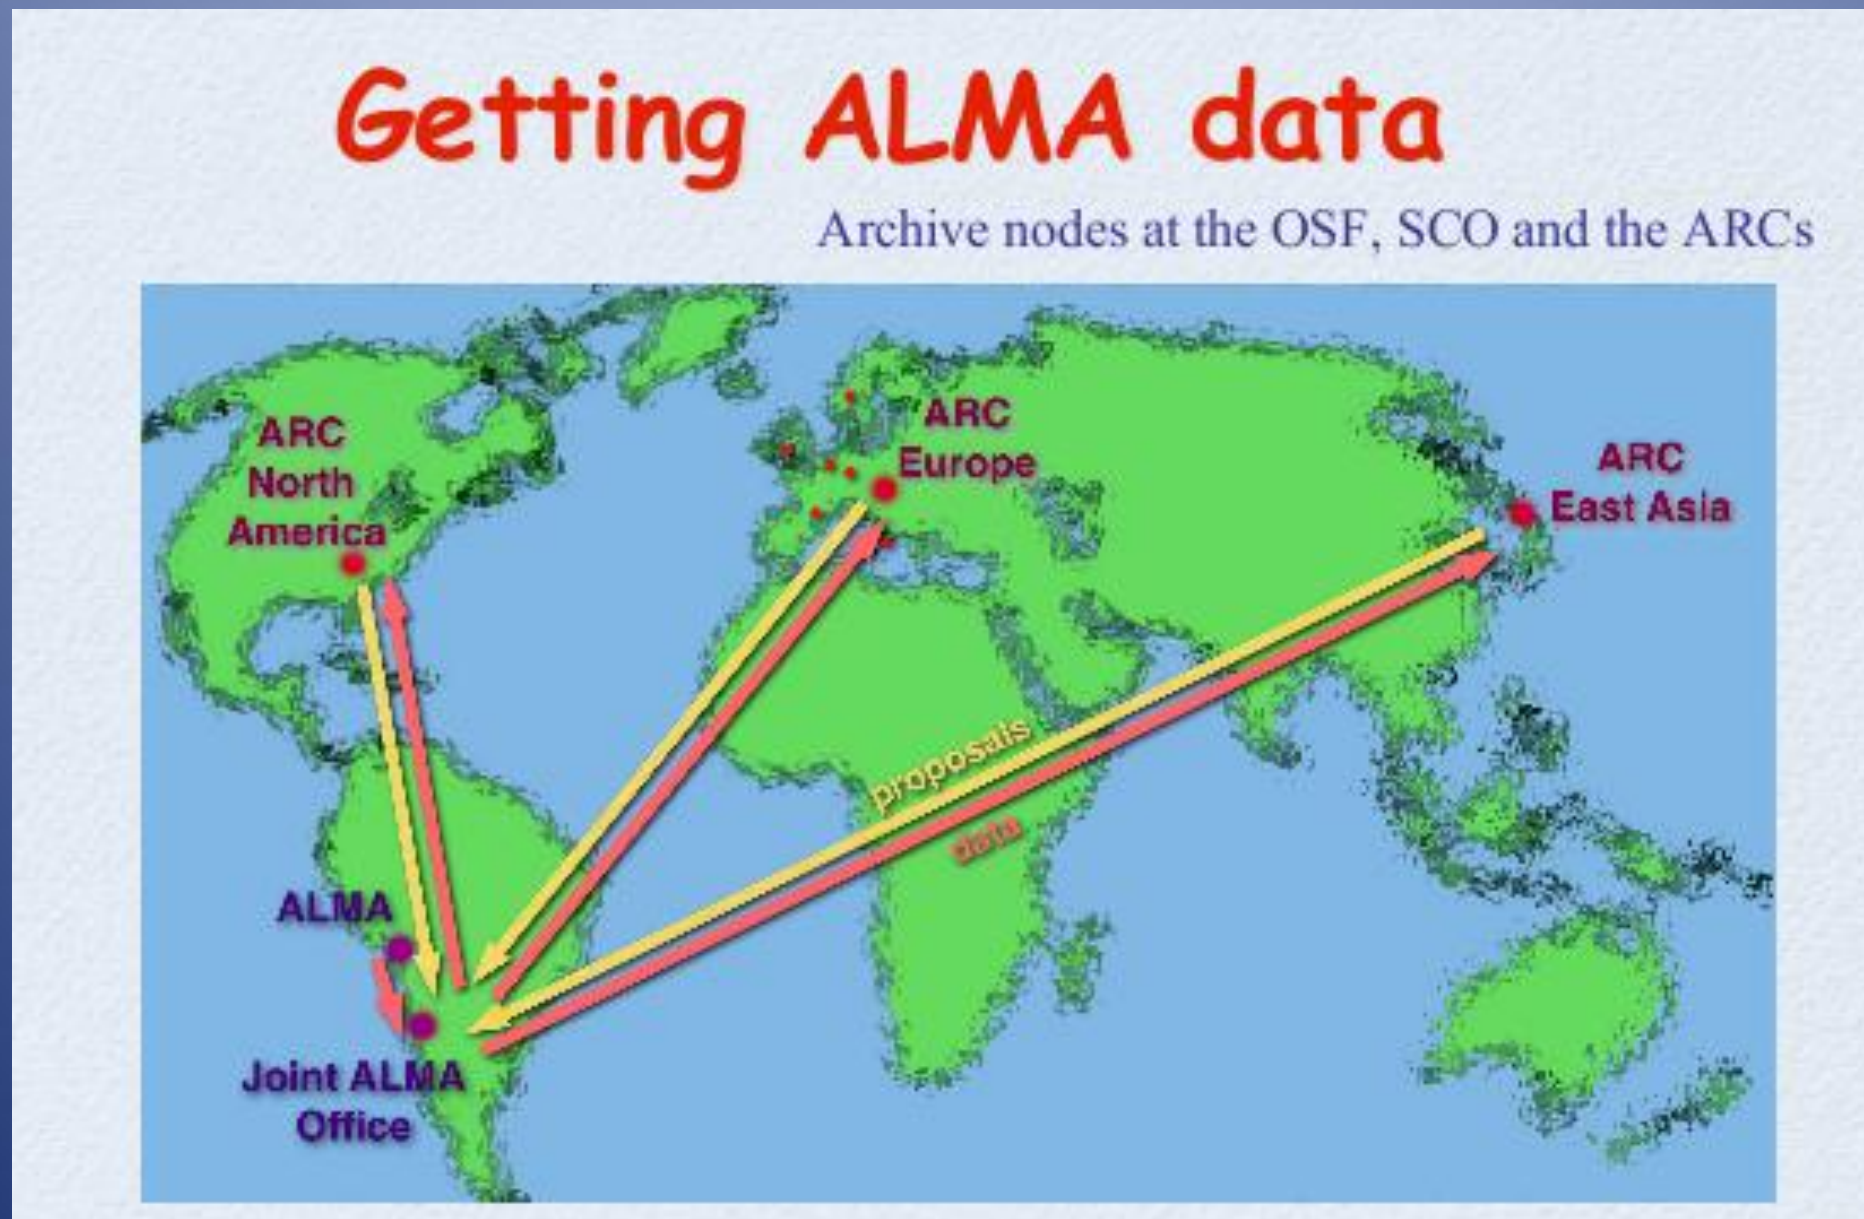

- First cadre of "support specialists" trained in CASA Training Boot Camp, Socorro October 2007
- After that, CASA training sessions have been organized in Santiago, Socorro...
- ... in Europe from April 2008 about 2 tutorials per year...
 - Casa Tutorial in Bologna (27-29 of April 2010)
 - Next one in Oxford ? (July 2010)

CASA User Support

- For informal queries and upfront support: contact your ALMA Regional centre
- For real bugs/ missing functionality/ problems/ questions: Use the CASA helpdesk at my.nrao.edu
 - tickets will be answered by (European) user support specialists
 - they may create a real 'JIRA' ticket if needed

ALMA Data Product

Archive nodes at the OSF, SCO and the ARCs

ALMA Data Product

Getting ALMA data

- Queue based dynamic scheduling
- Raw data passed through multi-tiered quality assurance
- Data proceeds to pipeline and archiving
 - Data available from ARC (ESO) within ~2 weeks (TBD)
 - Pipeline products (images and calibrated u-v data), raw data, and offline data processing software made available to PIs
 - Pipeline available towards end of construction

f2f Support at the ARCs

ALMA pipeline provides high quality products, but...

- Expert hands-on data reduction help from ARC nodes staff provided on request
 - ... for problems and/or complicated observing techniques → local ARC node
 - ... for projects related to a particular expertise → specialist ARC node
- The first point of contact for data reduction help is the ESO node in Garching

f2f Support at the ARCs

Italian ARC node located in Bologna

- Expertise: Data Handling/ Grid Technology, Polarimetry, Mosaicing, Surveys
- Contact person Jan Brand
- 6 staff members
- 3 postdoc
- 1 system manager
- Website: www.alma.inaf.it

CASA on the Web

- <http://casa.nrao.edu> -- CASA Home Page
- Main resource for end users
 - <http://my.nrao.edu> -- NRAO Services (incl. registration/download of CASA)
- Help Desk/Installation Front; manned by scientists (ALMA, ARC, NAUG, etc) to handle front-line users support.

Casa Documentation
